ABSTRACT

A solar radiation shielding member comprising solar radiation shielding fine particles, which has a transmittance having a maximum value at a wavelength of from 400 nm to 700 nm and a minimum value at a wavelength of from 700 nm to 1,800 nm, and, where the maximum value of the transmittance is represented by P, the minimum value thereof by B and the visible-light transmittance by VLT, has solar radiation shielding performance satisfying the following mathematical expression (1) at 60% ≤ VLT ≤ 80% or satisfying the following mathematical expression (2) at 38% ≤ VLT ≤ 55%:

$$P/B + 0.2067 \times VLT \geq 17.5 \qquad (1); \text{ or}$$

$$P/B + 2.4055 \times VLT \geq 133.6 \qquad (2).$$
